ZanHotel-Ajira Portal
Software Requirements Specification (SRS)

1. Introduction

1.1 Purpose

The purpose of this document is to define the requirements for the development of ZanHotel-Ajira Portal, a web-based platform to connect hotel employers with job seekers in Zanzibar and across Tanzania.

1.2 Scope

The system will allow:
- Job seekers to register, log in, and upload documents
- Hotels to post job opportunities
- Job seekers to apply with a single click (using previously uploaded details)
- Admins to manage users and job listings

1.3 Definitions

- SRS: Software Requirements Specification
- UI: User Interface
- CV: Curriculum Vitae
- JWT: JSON Web Token
- CRUD: Create, Read, Update, Delete

2. Overall Description

2.1 Product Perspective

ZanHotel-Ajira is a self-contained job portal, built using React (Frontend) and Django (Backend), with MySQL or PostgreSQL for data storage. It can be accessed from any browser.

2.2 Product Functions

User Registration & Login, Hotel Registration, Document Upload, Job Posting, Job Application, Complaint Reporting, Admin Dashboard

2.3 User Classes

- Job Seeker: Registers, uploads documents, applies for jobs
- Hotel: Posts job opportunities , Drop job post and views applications
- Admin: Manages platform users and content

2.4 Operating Environment

Frontend: React.js
Backend: Django
Database: MySQL or PostgreSQL
Hosting: Render

2.5 Constraints

Web-based and Mobile Application, must support resume uploads in PDF/DOCX, Secure authentication (JWT)

3. System Features

3.1 User Registration

Registers with name, email, username, password
Uploads CV, photo, and certificates
Data stored and reusable during job application

3.2 Hotel Registration

Registers with hotel name, email, and location
Posts job opportunities

3.3 Login System

JWT token-based authentication for both users and hotels

3.4 Job Application

Job seeker can apply with a single click
Hotel receives applicant's details

3.5 Complaint System

Users can report complaints
Admin receives and manages them

3.6 Admin Panel

View, add, delete, or suspend users and hotels
View complaints and statistics

4. External Interface Requirements

4.1 User Interface

Responsive, clean layout with navbar and sidebar

4.2 API Interfaces

RESTful API using Django REST Framework
Endpoints: /register, /login, /upload, /apply, /post-job

4.3 Hardware Interfaces

Not applicable

4.4 Software Interfaces

MySQL or PostgreSQL, Email API, JWT authentication

5. Non-Functional Requirements

Performance

Should load within 3 seconds

Scalability

Support at least 100 concurrent users

Security

Password hashing, CSRF protection, JWT

Usability

Accessible on mobile browsers

Reliability

99% uptime expected

Maintainability

Modular codebase with reusable components

6. Appendix

6.1 Future Features

Mobile App, SMS notifications, Live interview scheduling

6.2 Assumptions

Users will have internet access and basic digital literacy
Hotels are officially registered entities
